

2023! We started the New Year with a bang and dived into our new theme – SPACE! We have loved exploring more about our planet Earth and learning about the galaxy. We have done so many different space related activities this month, from building our own rocket to designing and sculpting our very own aliens! We also explored other new art skills when creating planets out of oil pastels and painting with water colours. Our Maths knowledge is continuing to grow and we can now use Part-Part Whole models to show the composition of numbers. It has certainly been a brilliant start to the year! 😊
